

3D-Laserdruck GbR

3D-Laserdruck are specialists in the additive manufacture of metal components. As proficient experts in the field of additive manufacturing we are equipped with profound engineering and process expertise, thus covering all required services including guided consultation, construction and product realization, tempering, mechanical processing as well as surface finishing. We work with aluminium, stainless steel, inconel, titanium and maraging steel.

Using innovative technologies, we are able to produce homogenous, fully load-bearing components from precious metals quickly, in designs optimized for real-world applications and with completely new functionalities. For challenges such as topologically-optimized, lightweight and cooling-optimized parts, 3D-Laserdruck is brought in by the customer right from the construction stage.
