

SCA Deutschland GmbH

For more than 30 years, SCA has successfully provided aluminium parts, sheets and bars for the aerospace industry. Our 3-axis CNC machining centres and CNC contour band saw, allow us the machining of plate dimensions of up to 2x4m. We do not produce finished parts. We deliver pre-machined parts – our Near-Net-Shapes which help our customers to significantly reduce their machining times because we handle the time-consuming processes such as surface milling, US dead zone removal and/or drilling for them.

We also offer titanium and steel through our French affiliate company. Our very flexible team processes enquiries/orders within 24 hours or even faster, if required.
